OBJECTIVE

Versatile Software Engineering student seeking a **Fullstack Developer Intern** position. Passionate about developing high-performance web applications and managing cloud-based infrastructure. I look forward to contributing across the entire tech stack, focusing on seamless integration, automation, and building reliable, user-centric software.

EDUCATION

2021 - Present

INTERNATIONAL UNIVERSITY IU - NATIONAL UNIVERSITY |

Information Technology - Network Engineering

Subjects: Web Application Development, Fundamental Concepts of Data Security, Algorithms & Data Structures, System & Network Administration, Scalable and Distributed Computing, Net-Centric Programming

WORK EXPERIENCE

3/2022 - 6/2022

MiuTea Coffee | **VIDEO EDITOR**

Produced, filmed, and edited short-form video content for TikTok, achieving high engagement through creative visual effects and trending formats. Managed the entire production workflow from storyboarding to final export, ensuring brand consistency.

5/2024 - 11/2024

Onekiwi Technology Co., Ltd | **INTERN DEVOPS**

Working with **AWS (EC2, S3, IAM)** to manage infrastructure. Familiar with **Docker**, **CI/CD pipelines**, and monitoring system performance.

SKILLS

- **Languages & Frameworks:** Python, JavaScript (Next.js, React.js), Node.js.
- **Cloud & DevOps:** AWS, Docker, Git, CI/CD, Linux Server.
- **Others (Personal Interest):** Canva, CapCut, Digital Photography, Video Editing.
- **AI & Data Science:** Machine Learning (Scikit-learn), Anomaly Detection, Prompt Engineering.
- **Databases:** PostgreSQL, MySQL, Supabase.

CERTIFICATIONS & LANGUAGES

English: Full Professional Proficiency.

IELTS 6.0 (Overall): Achieved in 2021 as a foundation for academic excellence.

Academic Environment: Currently pursuing a Software Engineering degree at **VNU-HCM International University** with **100% English-taught curriculum**, demonstrating strong technical communication and documentation skills.

PROJECTS

10/2025 - 12/2025

Shople – Fullstack E-commerce Platform | Fullstack Developer
Team size: solo
Link: https://github.com/ZackNguyen0211/Shople-project.git
Technology: Next.js 14 (App Router), TypeScript, Supabase (PostgreSQL), JWT, Monorepo, Vercel.

- **Developed a comprehensive multi-tenant e-commerce platform** with dedicated dashboards for Admins, Shop Owners, and Customers, supporting end-to-end shopping workflows.
- **Architected a secure authentication system** using JWT with HTTP-only cookies and bcrypt, ensuring robust session management and role-based access control (RBAC).
- **Designed a scalable PostgreSQL database schema** on Supabase with 9+ relational tables, optimizing queries for product filtering, order tracking, and shop analytics.
- **Engineered a production-ready codebase** using a Monorepo structure, implementing rate limiting, multi-language support (i18n), and SEO-friendly SSR for high performance.

1/2026 - Present

SCAIOT – IoT Cold Chain Monitoring System | Fullstack & IoT Developer
Team size: solo
Technology: Next.js (App Router), Python, ESP8266, Raspberry Pi, MQTT, InfluxDB, Scikit-learn (Isolation Forest), Docker.

- **Developed an end-to-end IoT system** for real-time cold storage monitoring, featuring a 3-tier architecture: Hardware Node, Edge Gateway, and a Web/PWA Dashboard.
- **Implemented Edge AI** using the **Isolation Forest** algorithm on Raspberry Pi to detect temperature anomalies locally, reducing cloud latency and bandwidth usage.
- **Engineered a resilient data pipeline** with a store-and-forward mechanism to prevent data loss during network disruptions, ensuring 99.9% telemetry integrity.
- **Built a high-performance Dashboard** with Next.js and InfluxDB, providing deep-dive analytics (24h trends, time-in-range) and secure JWT-based authentication.

Source code is private due to thesis regulations; available upon request for interview purposes
